

Healthnet

Design and Architecture

John Bauman
Kyunghwan Choi
Adam Goldhammer
Eugene Marinelli

Status Update

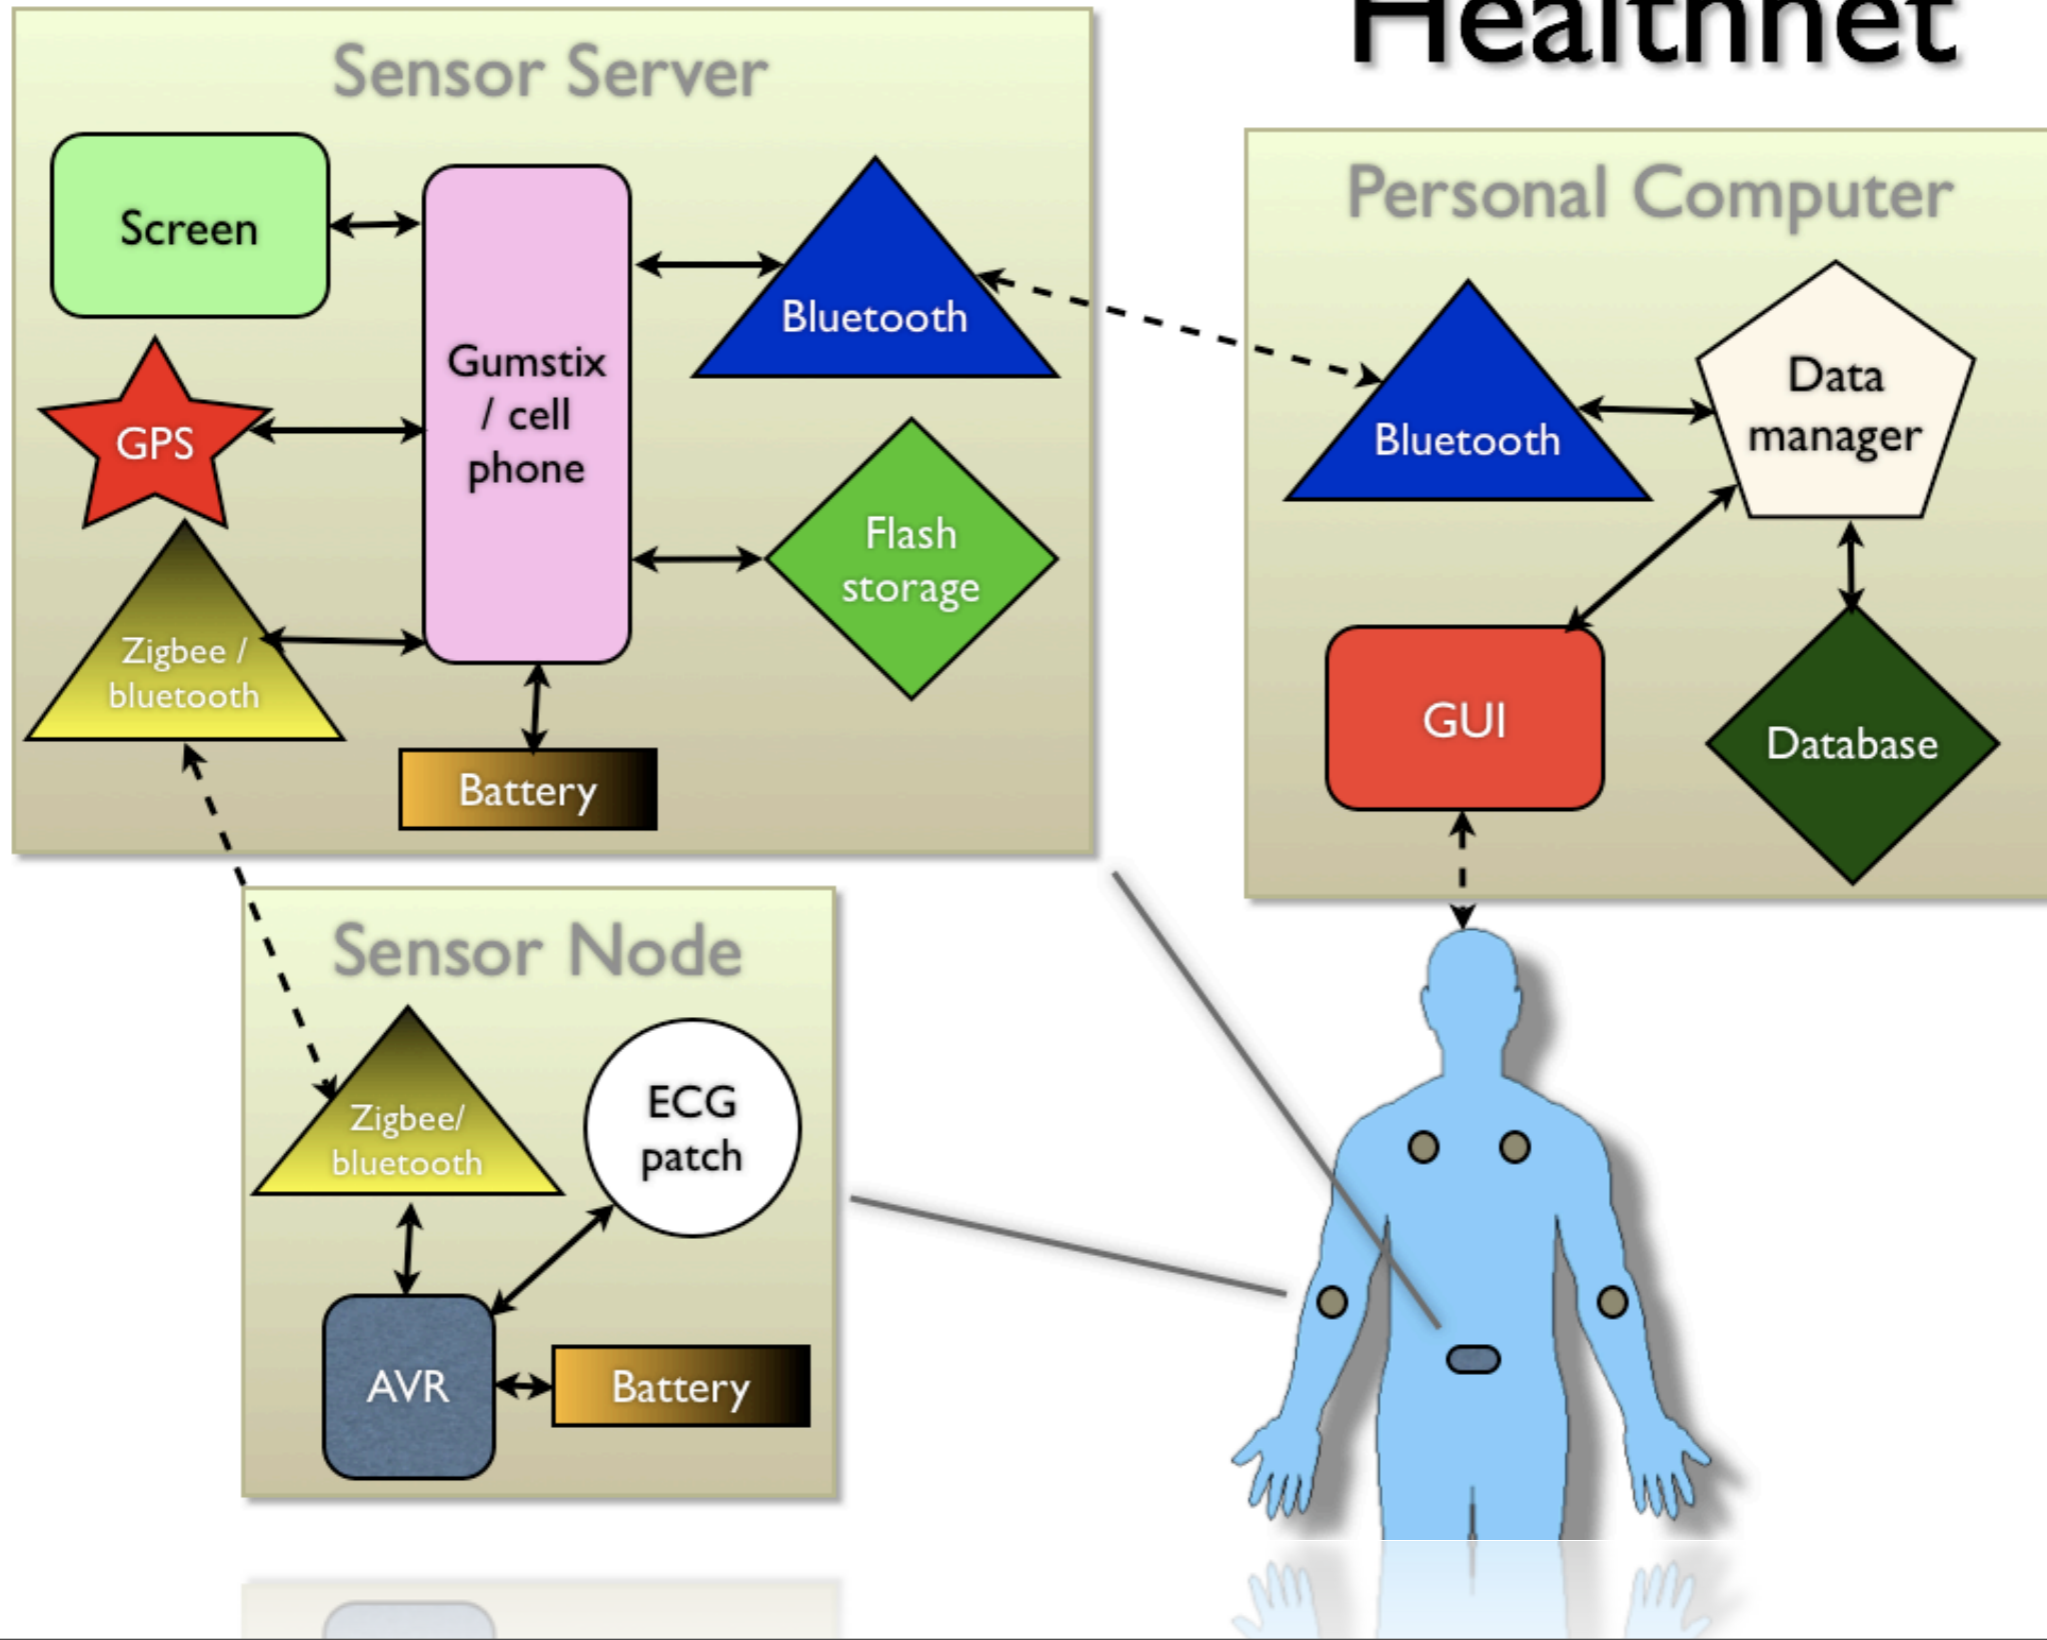

- Idea: On-body network which monitors and analyzes personal activities.
- Parts ordered. Waiting for them to arrive.
- Considering cell-phone instead of gumstix for sensor server.
- May use mica2dots instead of custom sensor nodes.

Architecture Overview

Architecture Specifics

Healthnet

Use Cases

- Device initialization and pairing of sensor nodes with cell phone or Gumstix.
- Streaming data from sensor nodes to cell phone or Gumstix while engaging in activity.
- Uploading data to computer for analysis.
- Displaying data to user via graphical interface.

Risks and Mitigation

● Risks

- Problems with sensors and nodes.
- Inability to support data rates between devices.
- Bluetooth.
- Data integrity.

● Mitigation

- Alternative node hardware: mica2dots.
- Compression and less frequent transmission.
- USB.
- Error detection. Variety of sensors.
